Snow-pack display on the night of 19/20 February 2024 in Rovaniemi. This was on river Kemijoki east of the city at where the small Lietesaari islands are. A fluffy layer over the hard ice, with only thinnest wetting at the interface. All odd radius circular halo members are in attendance, the 23° halo visible in its top part. 67 frames stacked and then flip-stacked. Crystals downstream.
