This plate has the best 46° spots so far (20/21 April 2024, old snow dump, Rovaniemi, DSC8922). First underside is facing the lamp, 01:46 I flip it around and 02:29 flip back. In the posts down, various images processed from the video are shown with and without simulated 22 and 46° halos. Mostly these are stacks. I processed also some max stacks this time.
