I started looking for reflection sunbuns in Ounasvaara 360 camera of Rovaniemi (<https://t.co/QOdwxoQCdX>). Reflected cloud rays have already turned up, so there is hope. In a meanwhile, the best catch is this display in northern Finland on 10 June 2023. It has been reported by several observers in Taivaanvahti (<https://t.co/vOH5x0hLBR>). But no one bagged the Tricker arc which is visible here. In this 3-post thread I have thrown in a motley collection of images, some used and flip-stacked.
