Looks like anthelion this morning 20 August 2024 in Rovaniemi in Ounasvaara camera. Weakly at 06:30 (second image), better at 06:40 (first and third image). Would be impossible catch by traditional observing. Automatic halo cameras must be the future. <https://flycam.roundshot.com/rovaniemi-1/#/>

I had missed 120° parhelion which flashes by at 8:00. 20 August 2024 in Rovaniemi.
