1/9 - 2024-12-22 18:54 UTC

Clearing the back-log. This was on the night of November 30 / December 1 2024, Rovaniemi. My arrival on this location triggered an alarm and the owner came to check me out (the car with headlights on). I was allowed to continue. Nothing of interest in this stack.

2/9 - 2024-12-22 18:54 UTC

November 30 / December 1 2024. Another stack.

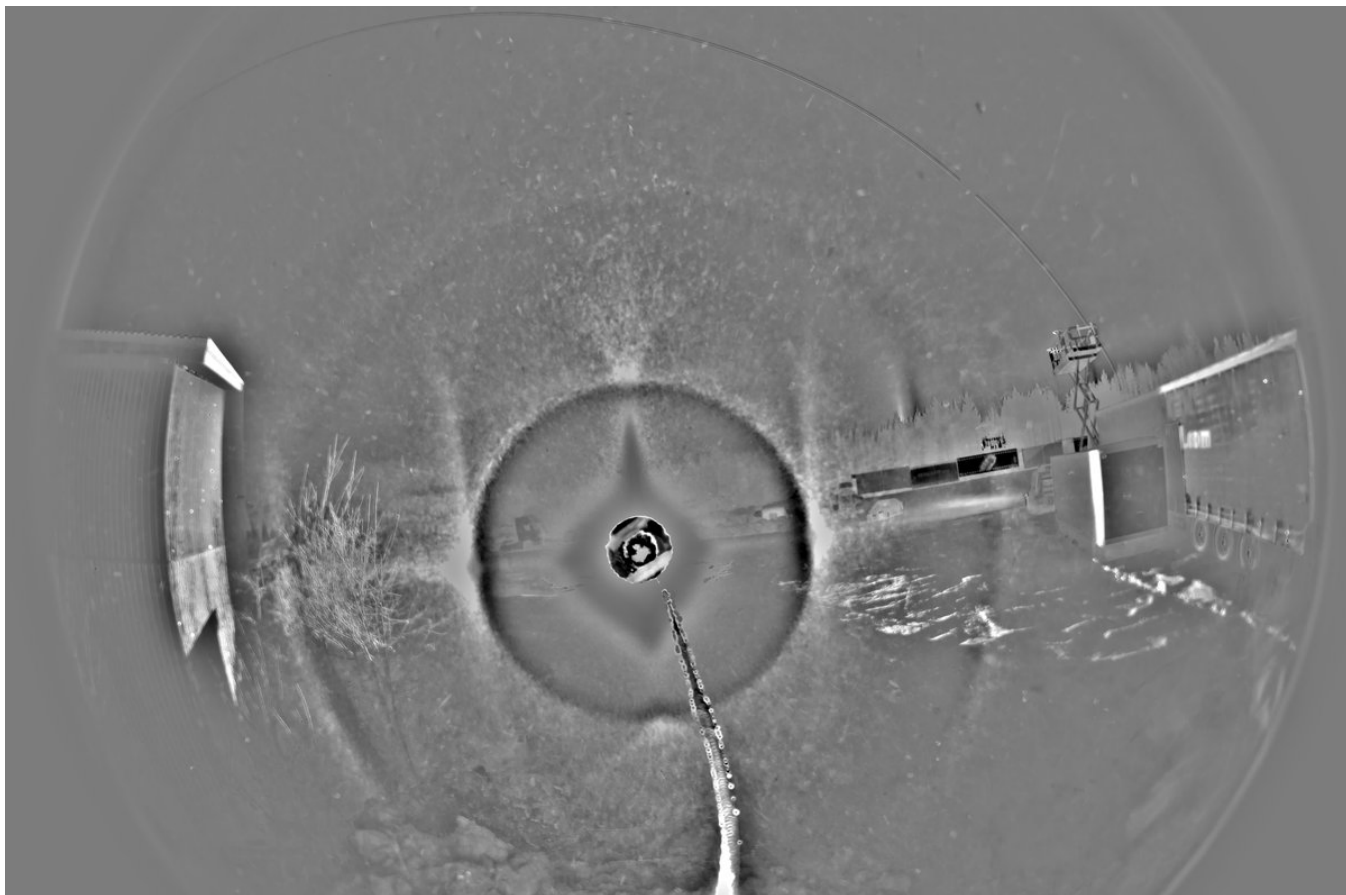

3/9 - 2024-12-22 18:54 UTC

November 30 / December 1 2024. This one is more interesting. There is helic arc but I don't see lower

vex Parry. Judging by the counterparhelia lamp is some 7 to 8 degrees below horizon. The lamp was on the level ground, camera on tripod some way up on a snow pile.

4/9 - 2024-12-22 18:54 UTC

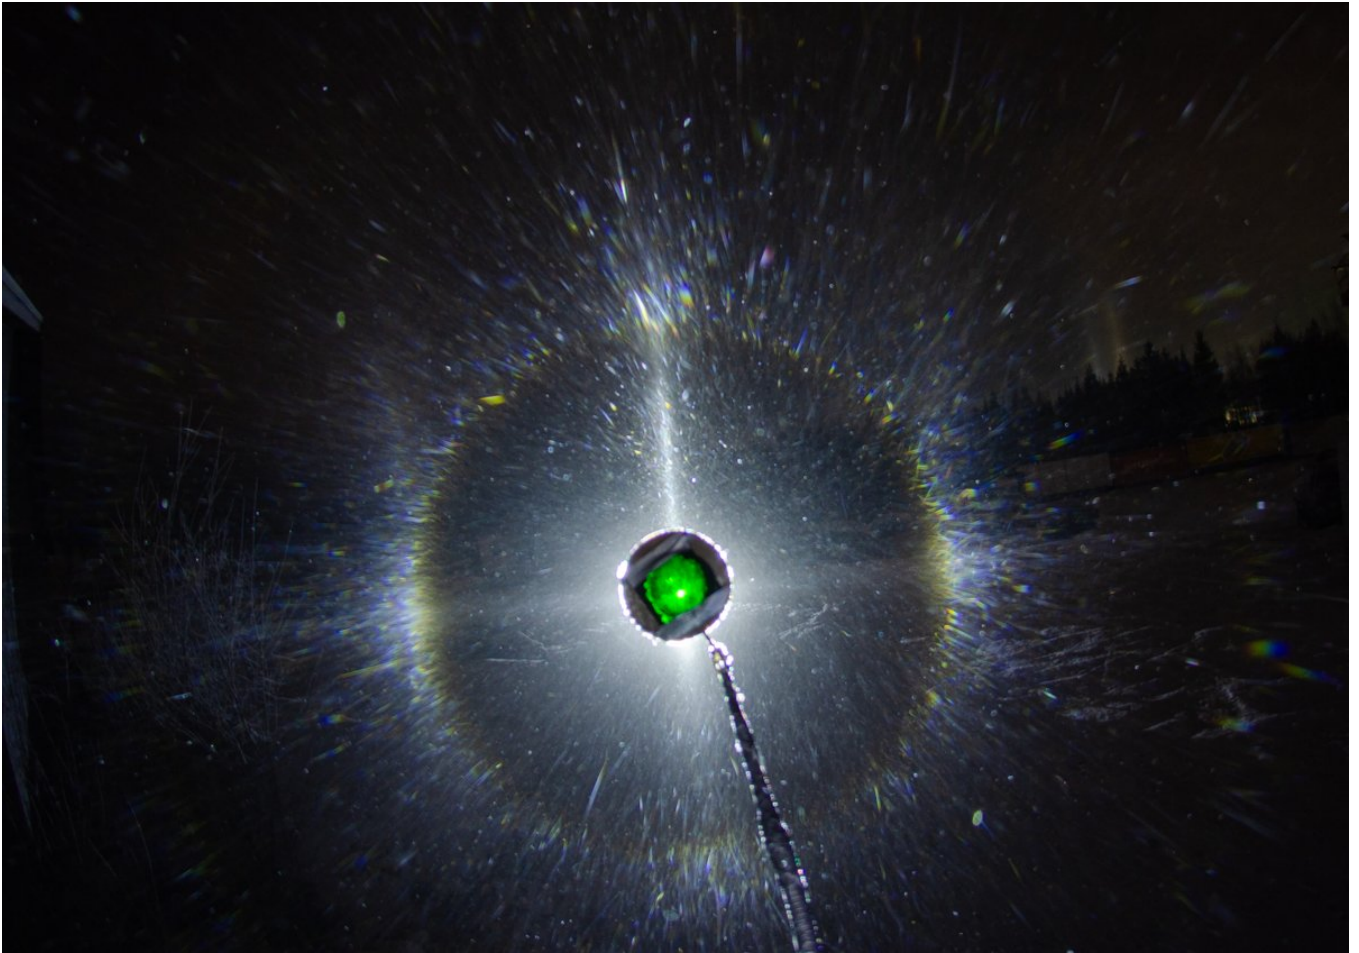

November 30 / December 1 2024. Yet another set of photos stacked.

5/9 - 2024-12-22 18:54 UTC

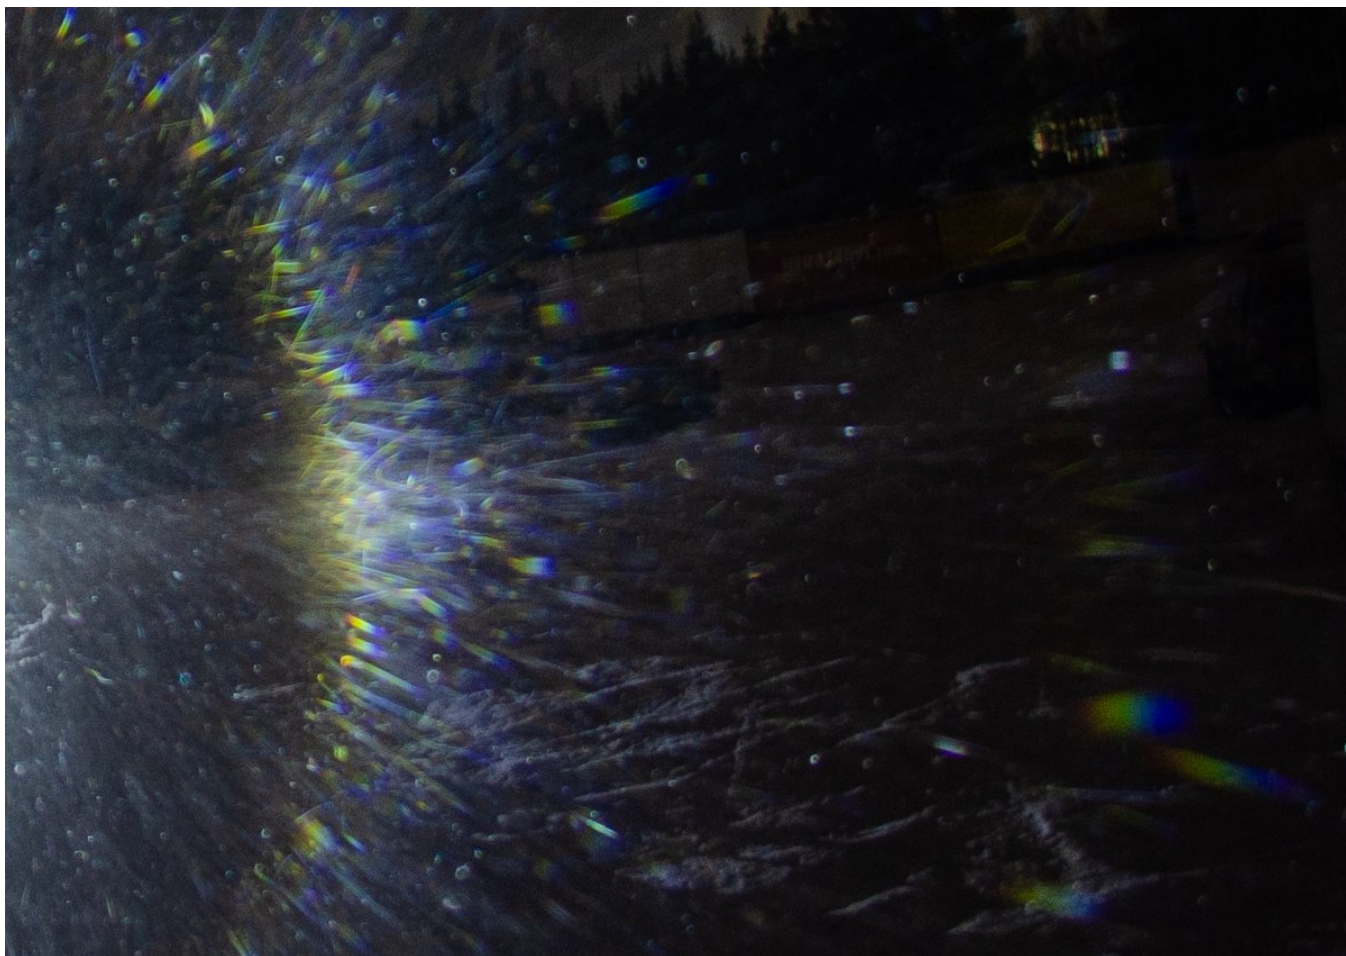

November 30 / December 1 2024. A cropped single image with shorter exposure. These parhelia, 22° halo and 46° halo glitters display normal spectrum color order in contrast to the psychedelic glitter that I photographed this same night in another location (the third image).

6/9 - 2024-12-22 18:58 UTC

November 30 / December 1 2024. Forgot from the previous post a close-up of the parhelia, 22° halo and 46° halo glitters. The psychedelic colors were treated in post

7/9 - 2024-12-23 07:56 UTC

November 30 / December 1 2024. Another stage. Lamp is below horizon some degrees. It's

counterhelic arc here, not helic arc.

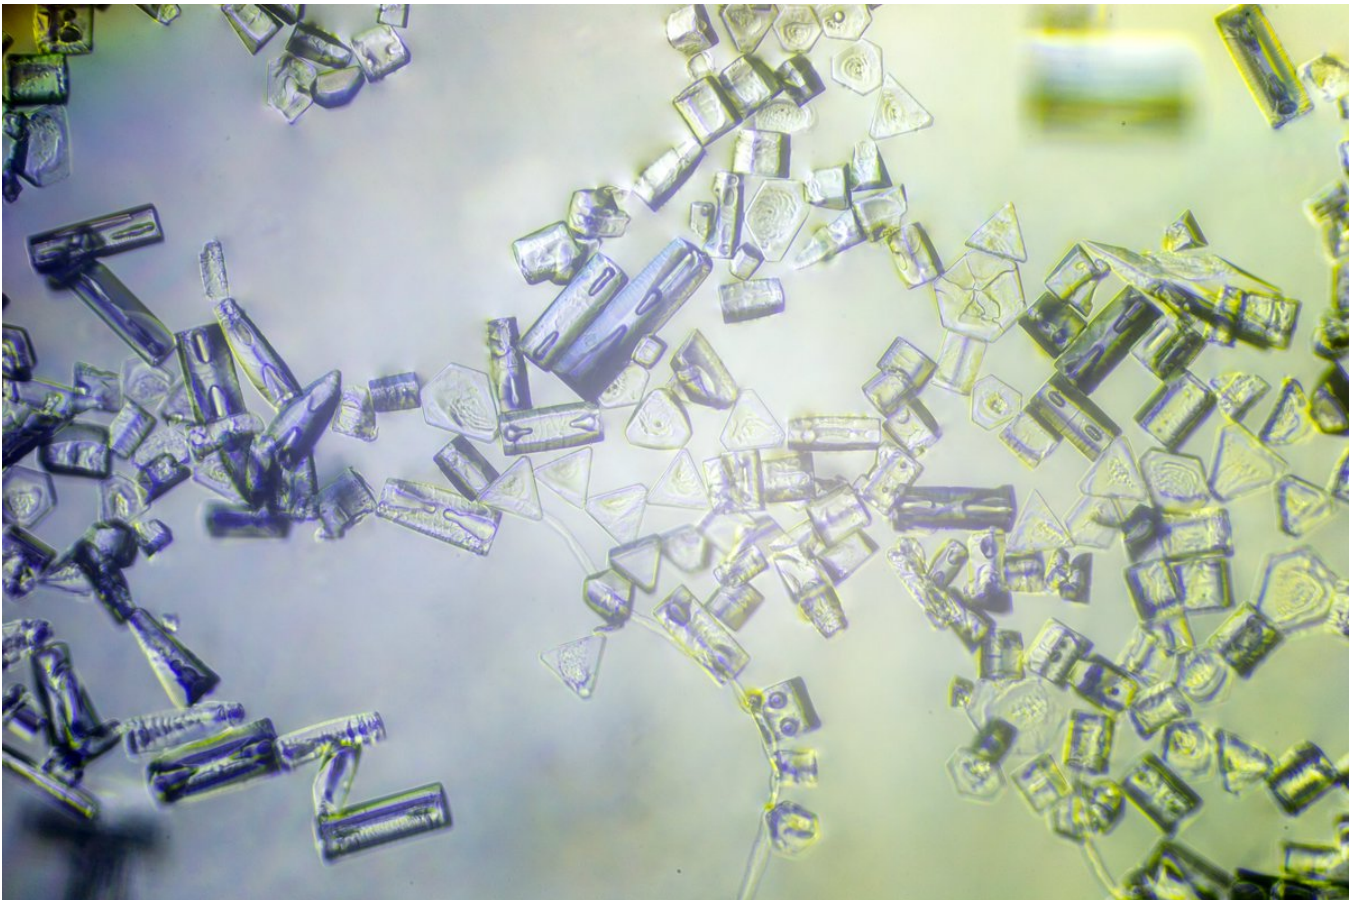

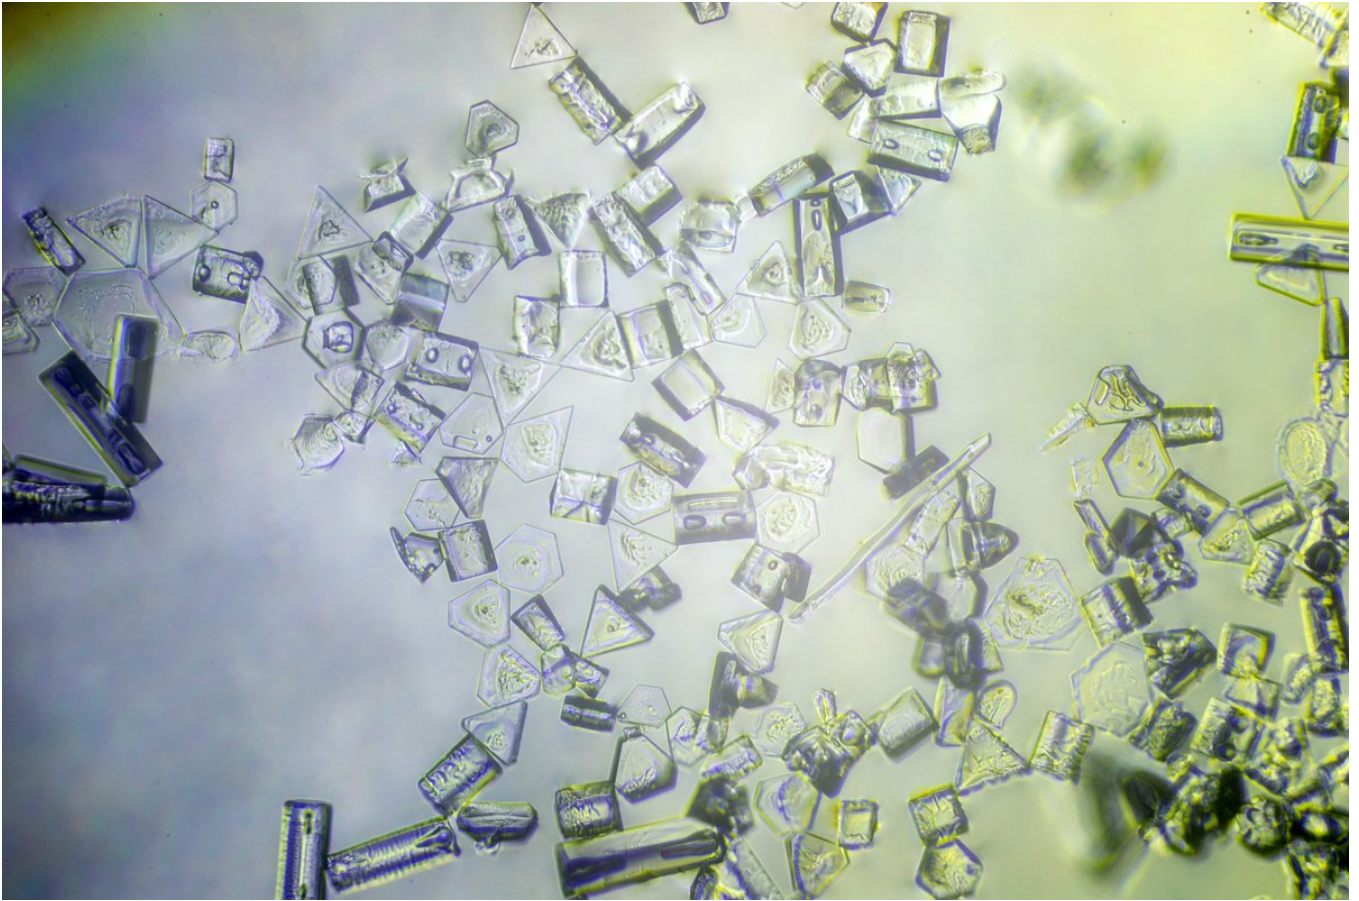

8/9 - 2024-12-23 08:03 UTC

November 30 / December 1 2024. Crystals that fell during the all-sky stage in the above post. Two things stand out: numerous triangulars and erosion. I used bio charcoal lighter fluid and it must have contained alcohol, probably methanol, which gnawed on the crystals. Now I have new liquids which should contain only hydrocarbons.

9/9 - 2024-12-23 11:14 UTC

November 30 / December 1 2024. Something in the ave stack of this stage necessitated a closer look.

There is a curious enhancement of spectral glitter in Wegener at the wind radiant. A max stack and close-up of the wind radiant. The last two images are select single frames of the wind radiant.
