1/1 - 2025-01-07 16:52 UTC

Woke up after midday and looked out: icefoggy down at the industrial area (7/8 January 2025 Rovaniemi). So when the sun was down but sky still lit up, I saddled up. Total crap, much like in the morning <https://t.co/B4vXuaYftd> But I thought it anyway good idea to take semi-low lamp shots from the Anttilanvaara asphalt pile. Lo and behold, as I set it up, the ice fog refined momentarily, as shown by the first two images, which are max and ave of 11 frame stacks of 25s exposures. There was also counterparhelic circle opposite to the lamp as well as normal parhelic circle going all around, but they were not any good that I would regret of having this limited view.

Wind was unusually strong for ice fog occurrence. FMI wind graph for the railway station, that is 4.5 km away, attached. The photos for the stack were taken 16:35-16:39. Temp at the railway station was -18 C.

Ice fog vanished when the wind boosted up at around 17:00 after a momentary lull.

Station: Rovaniemi railway station, 0.4 km from forecast location

Latest observation: Tue 7.1. 18:10

Temperature	-18.6 °C	Dewpoint	-20.5 °C
Humidity	85 %	Wind	3 m/s
Wind direction	north-east wind (50°)	Wind gusts	5 m/s
Visibility	28 km	Cloud cover	Mostly cloudy (7/8)
Pressure	1008.4 hPa
