13-14 March 2025, Ylikylä swimming site, Rovaniemi. Solitary Moilanen arc (pillar does not count) was visible for quite long time in this location, here is a stack of the first set, 43 frames. I actually was trying a crystal sample here, but don't remember what went wrong. Something to try to set right coming winter, but then these kind of displays are not common in my experience.

13-14 March 2025, Rovaniemi. Animation of the 43 frames in b-r. The swarm originated from Ylikylä snow-dump where Juujärvi Racing company was making deposit snow.

13-14 March 2025, Rovaniemi. Four single frames, lightly usmed, from the 43 set. I will try to look at the rest of the photos in the coming days.
