10/11 Feb 2026, Rovaniemi. 64 x 13s. The hydroelectric plant parking lot was again the place to be. I arrived to a full action of a big crystal display in the floodlight, with Moila dominating. Got busy to get the photography and crystal sampling going. Here are versions of ave of the first 64 x 13s set and a partial max of 19 frames.

Crystal sample was strewn with the type that we associate with Moilanen arc and they were big indeed. Photos looked all right from the camera screen, hopefully they stand also closer scrutiny. Will add later.

10/11 Feb 2026, Rovaniemi. A selection of crystal photos. They are not a total failure, but something is still eating away the crystals. I am getting tomorrow purified gasoline. We'll see then if it is the liquid.

There was also helic arc in this display. The first stack of the above post does not show it, or maybe there is a suggestion in the first image if you view it very small. But I saw it with my eyes in the parking lot light right from the beginning and also photographed it. Will publish later.

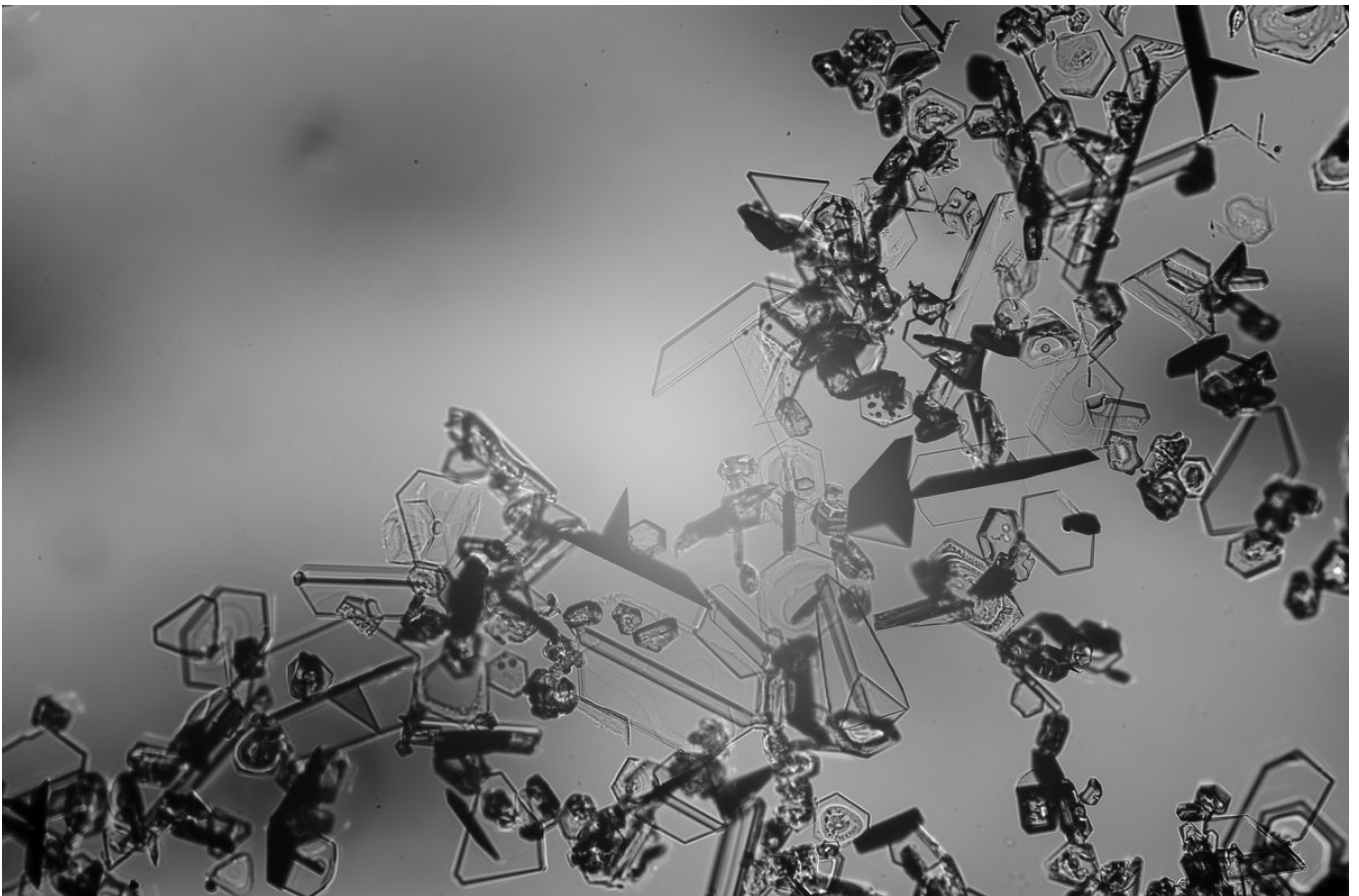

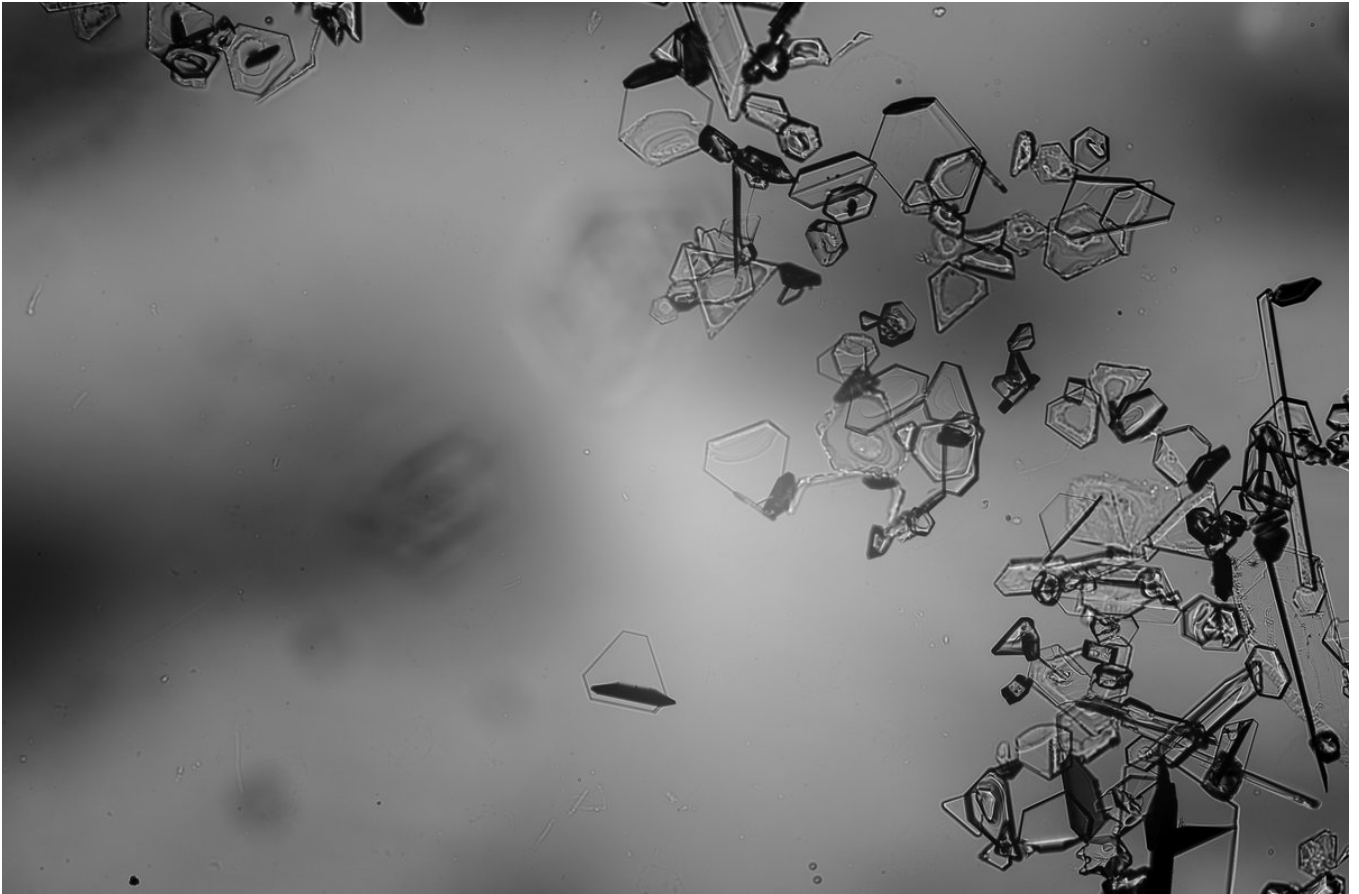

Anyway, regarding the helic arc, it is of some interest that I did not see any columns in the sample.

10/11 Feb 2026, Rovaniemi. More crystals.

4/6 - 2026-02-11 13:11 UTC

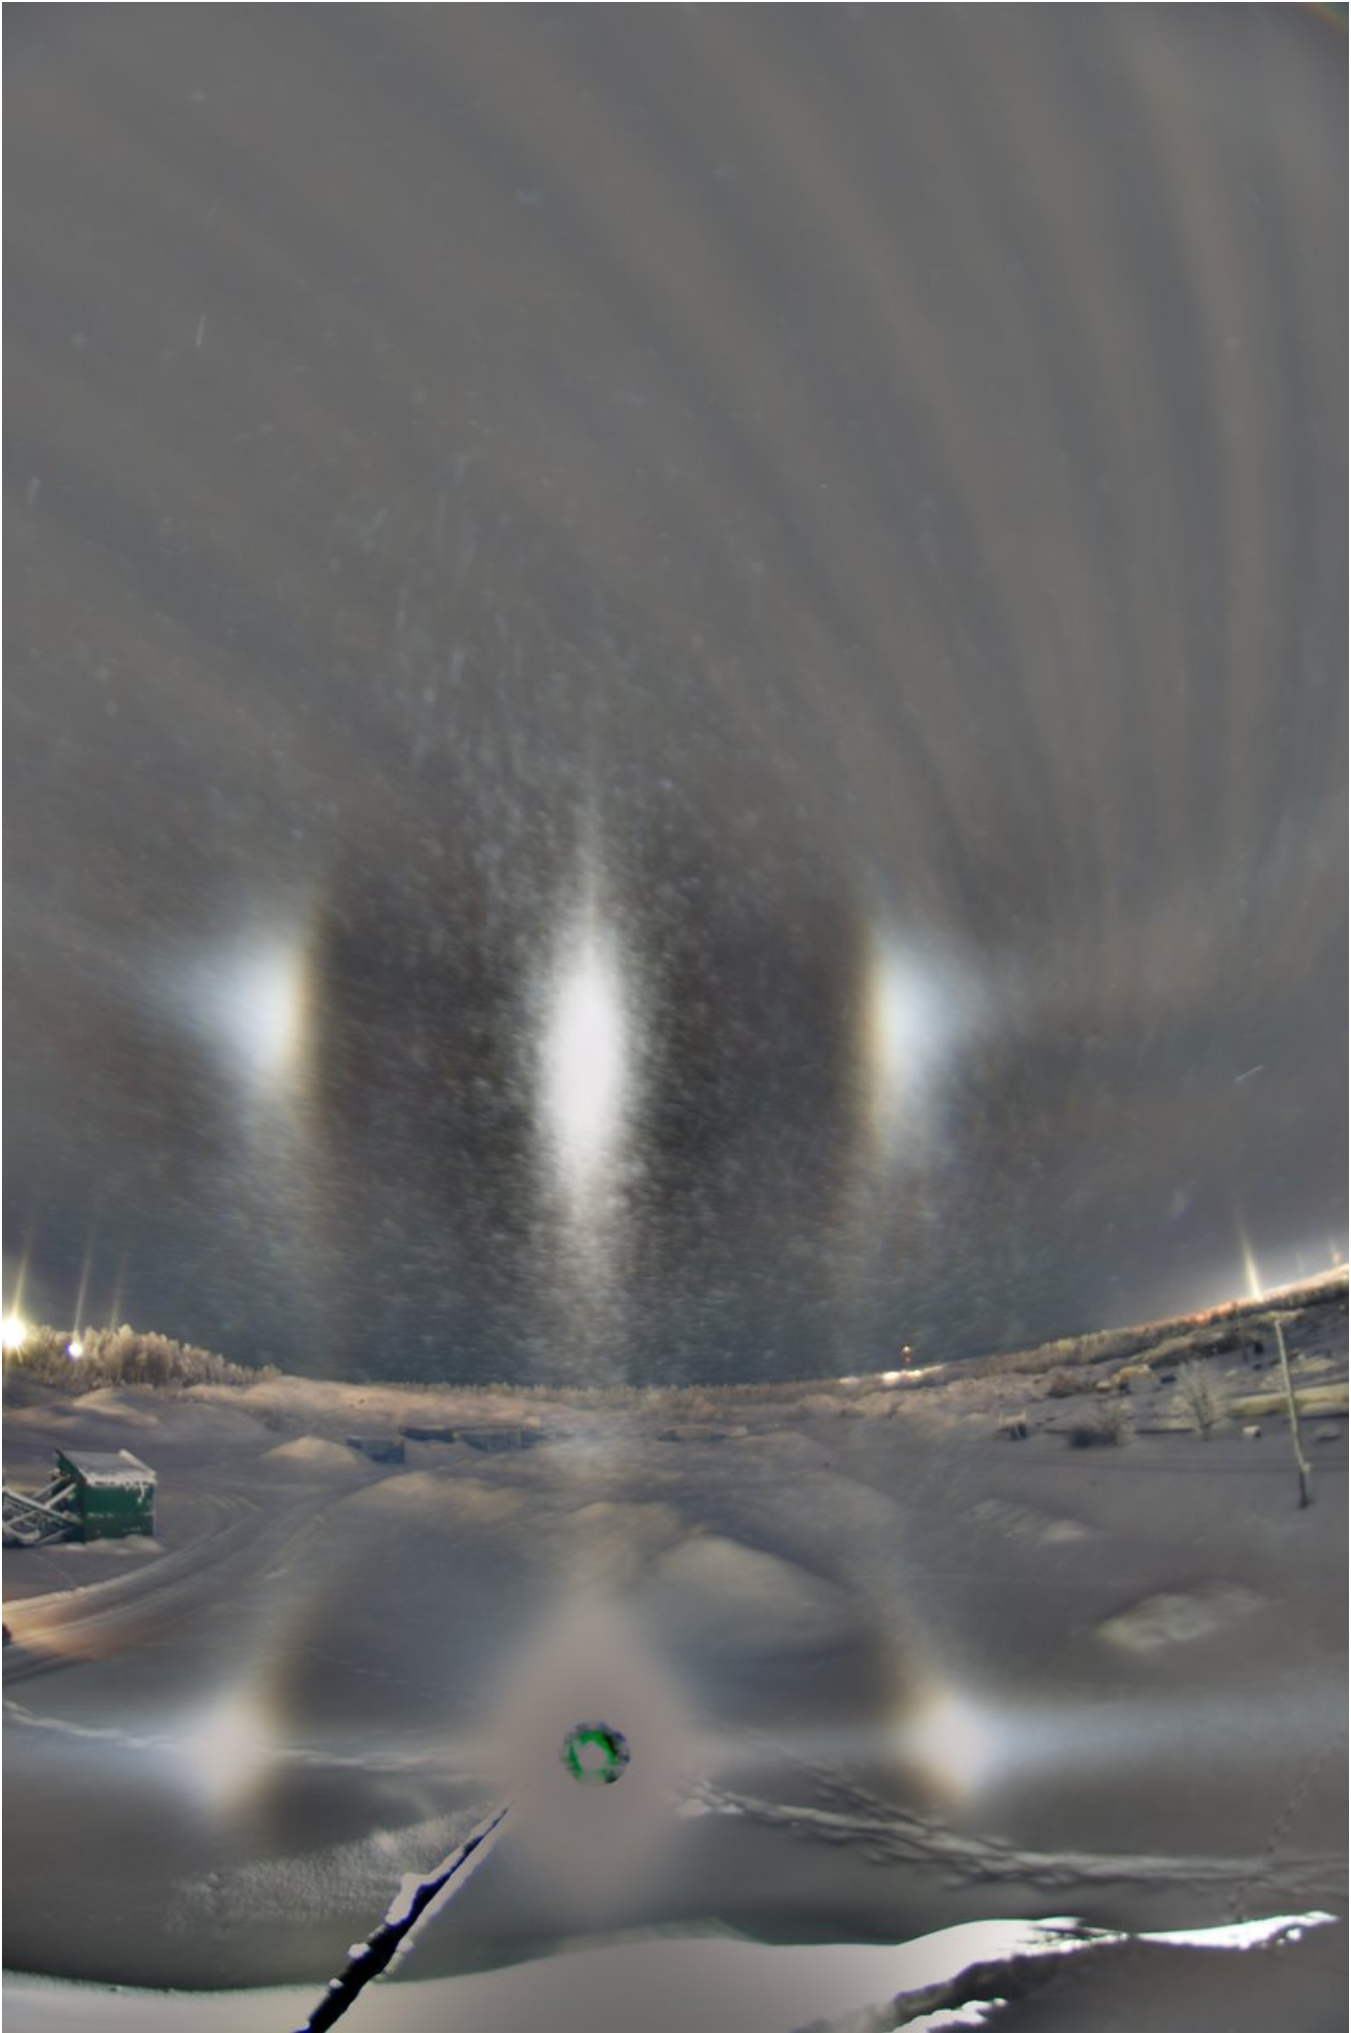

10/11 Feb 2026, Rovaniemi. Floodlight helic arc photographed during the first post's stack. Its diffuse

form was visible to the eye as well.

10/11 Feb 2026, Rovaniemi. On the way to Valajaskoski stopped in Betonitie in the industrial area because there were pillars around. Too bad it vanished, would have liked to see what a longer stack would have fleshed out here. 19 x 30s.

6/6 - 2026-02-12 14:53 UTC

10/11 Feb 2026, Rovaniemi. More crystals of the Moila display. We need electron microscope to make progress. Fairbanks has electron microscope and plenty of Moila displays in the power plant plumes.
