14/15 Feb 2026, Rovaniemi. Another night, another Moilanen arc. Background glow was strong and in most stacks Moila got overexposed, but in this heavily underexposed 42 x 8s set it shows up well. Sampled also crystals. The location once again happened to be the Valajaskoski hydroelectric station parking lot. Clear skies, didn't seem to be any thin fog layer above the ground. Left at midnight, back 5 am. Temp around -15 C upon leaving, below -20 C when coming back (Apukka -27 C at 5 am).

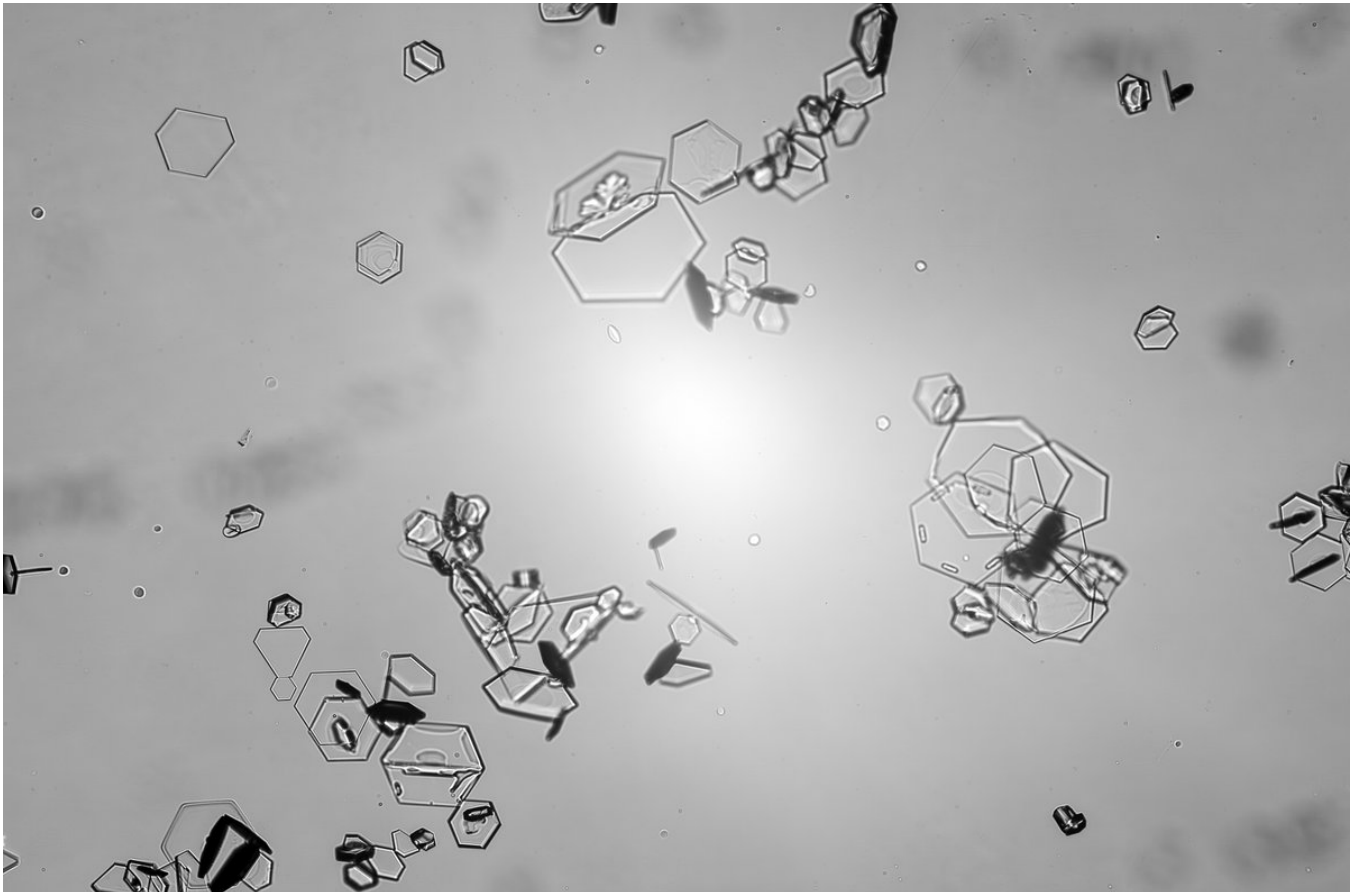

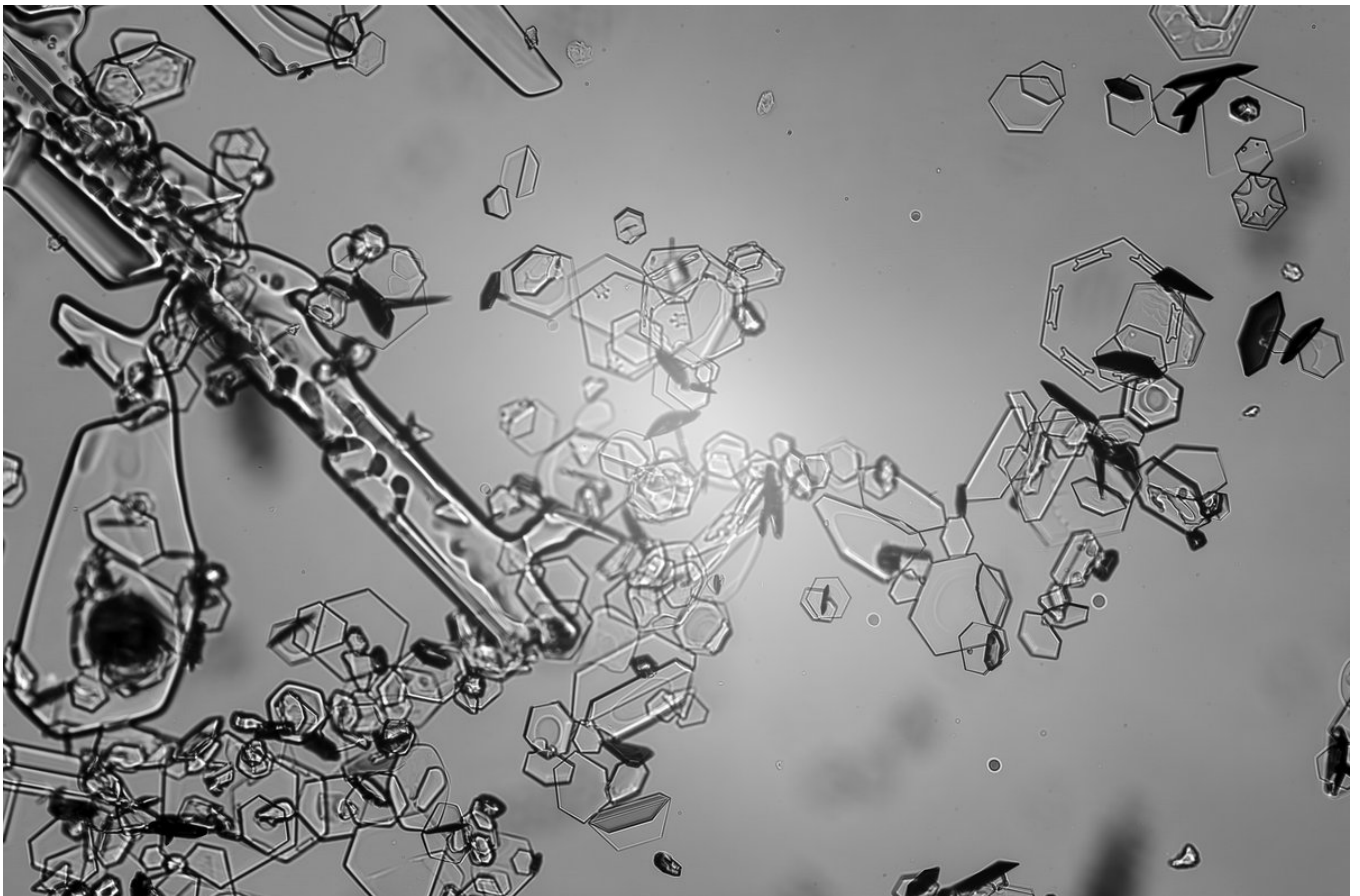

2/7 - 2026-02-16 12:27 UTC

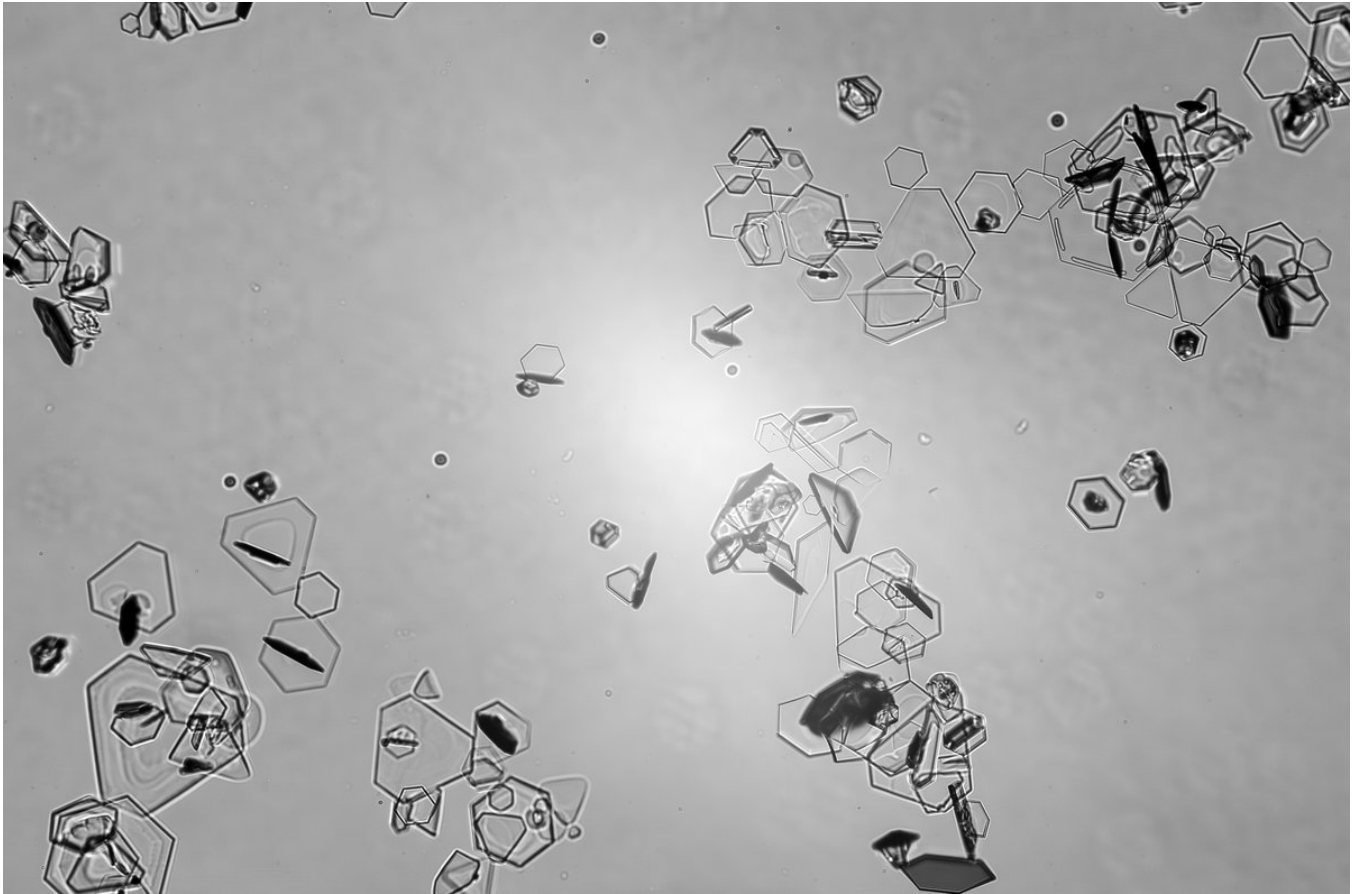

14/15 Feb 2026, Rovaniemi. Took two sets of crystals, here is the first set. I'll post later the corresponding display photos.

And as is obvious, I still haven't been able to solve the brighter milky area in the middle. Next I'll try placing the light further from the microscope.

But at least the crystals are now intact. I used the purified gasoline that I ordered some time ago. Let see if this holds in the coming up samples.

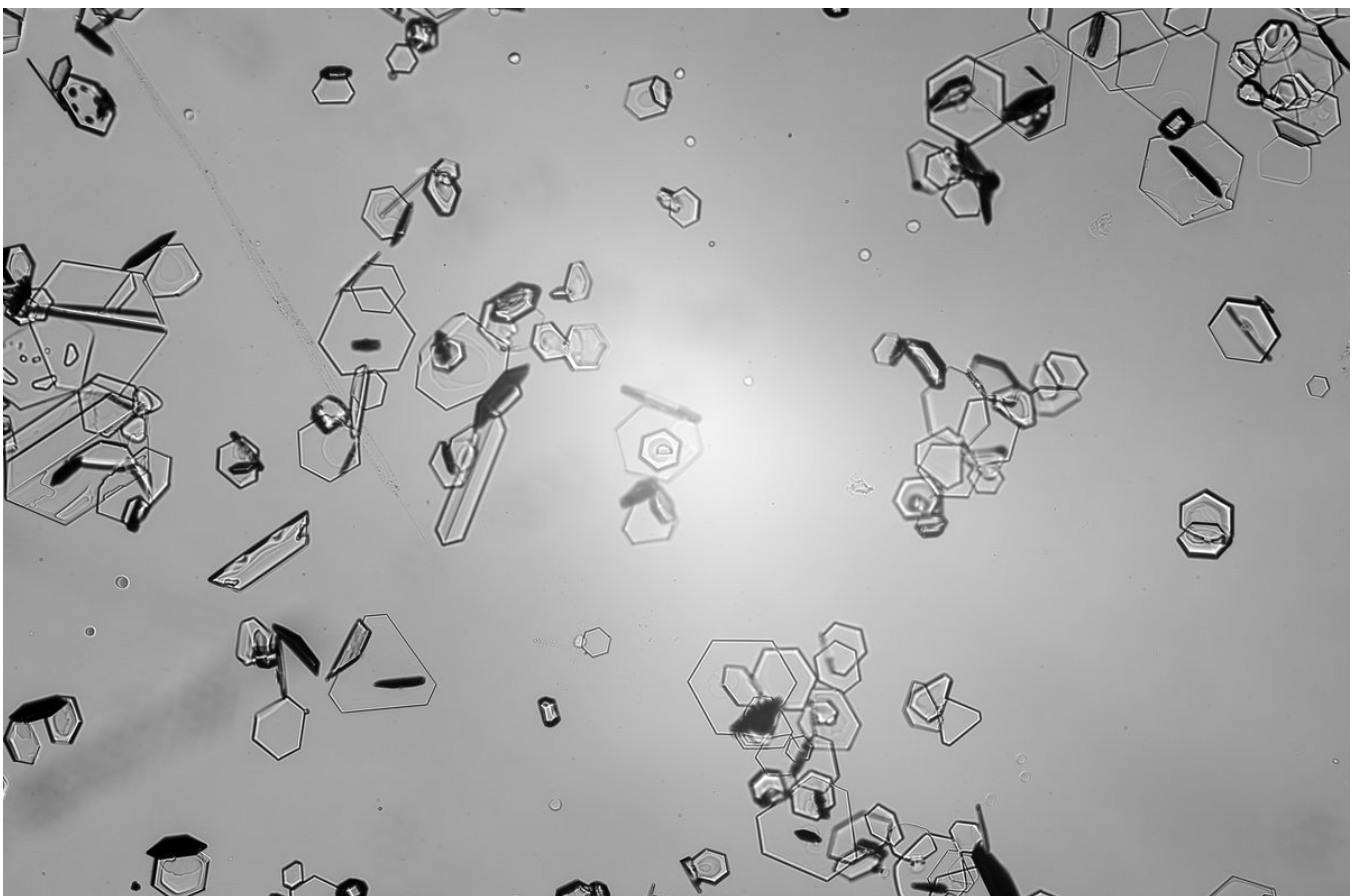

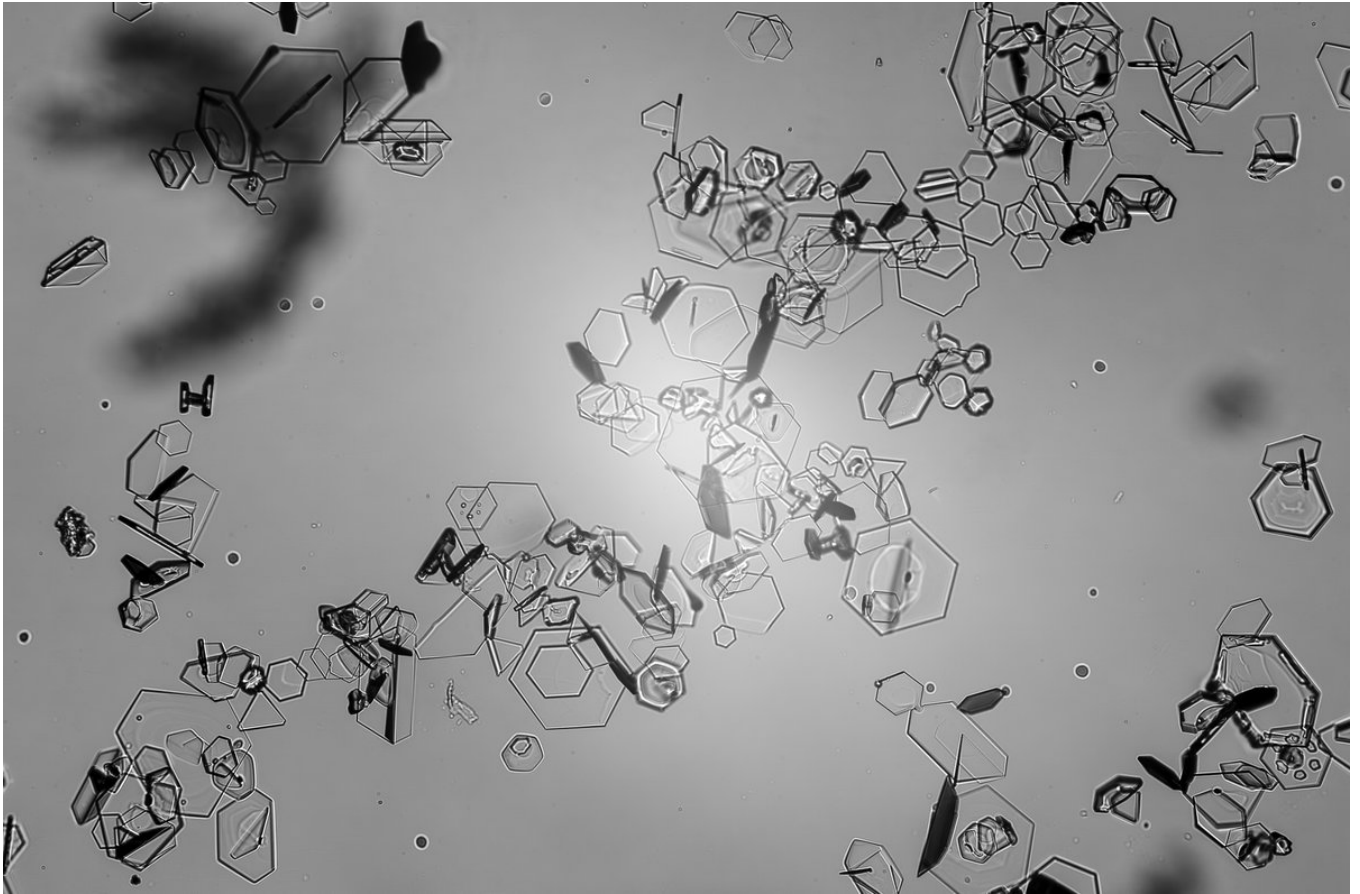

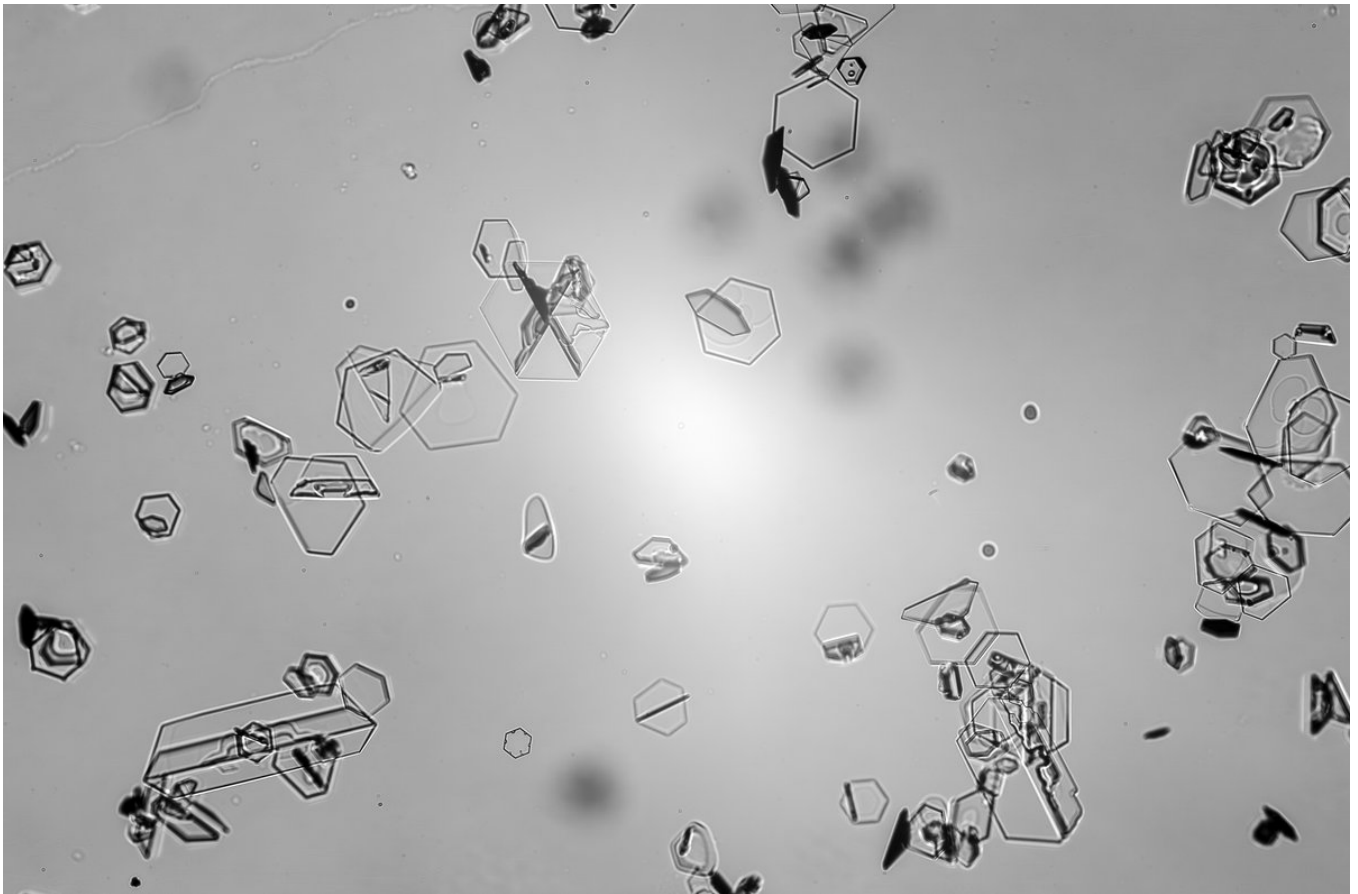

3/7 - 2026-02-16 12:28 UTC

14/15 Feb 2026, Rovaniemi. More crystals from the first set.

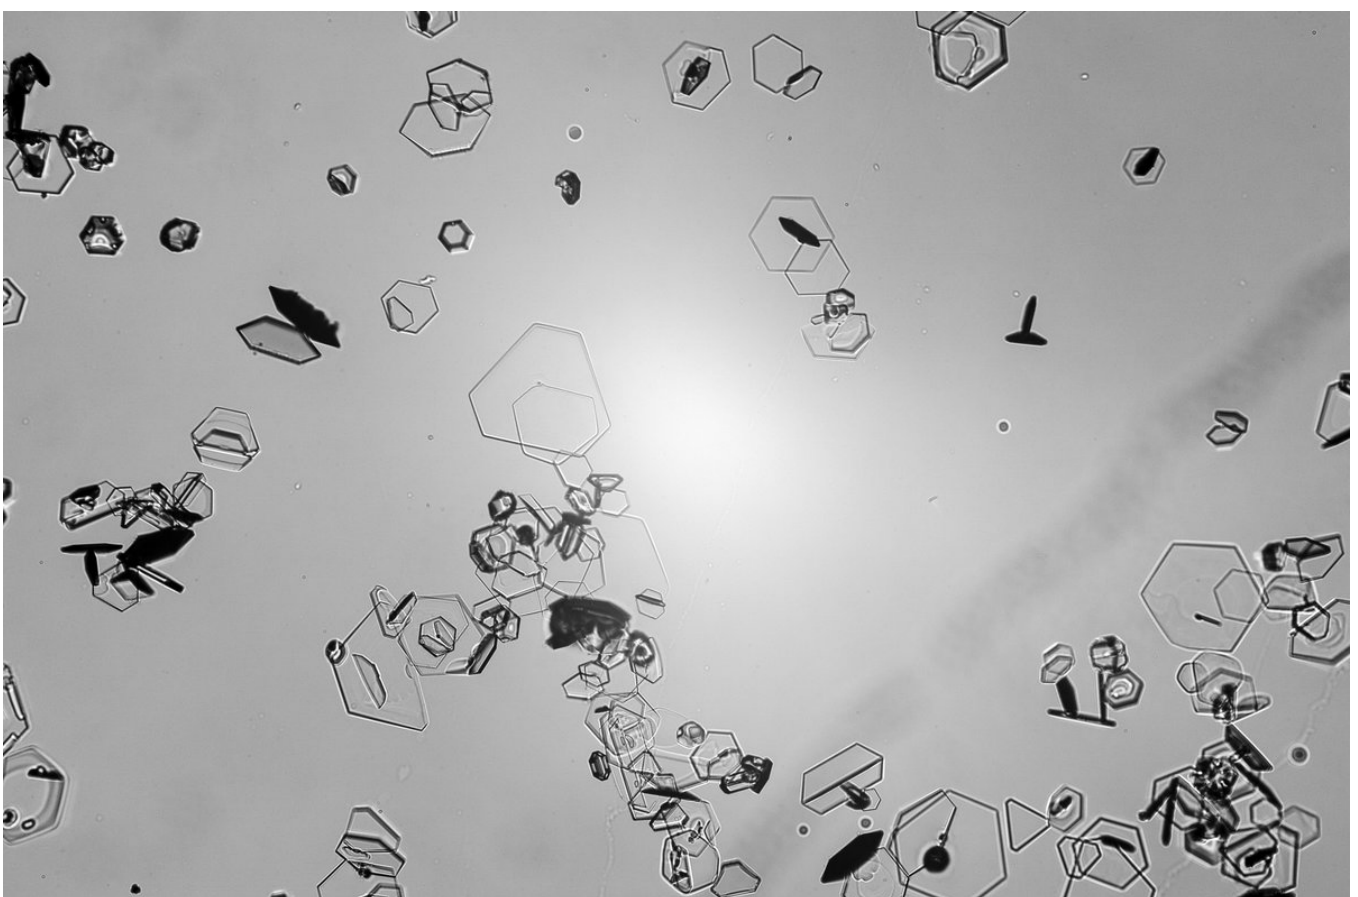

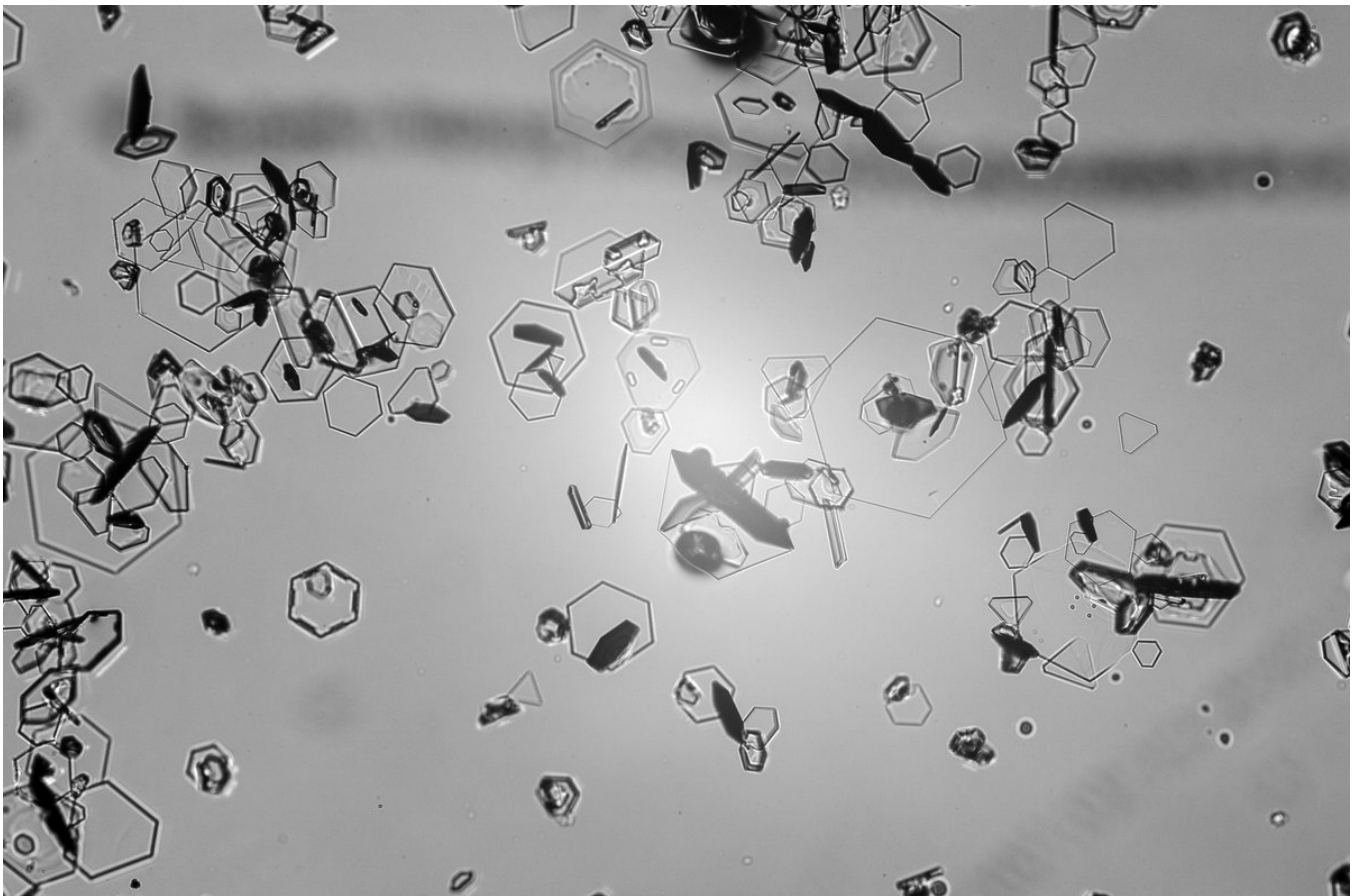

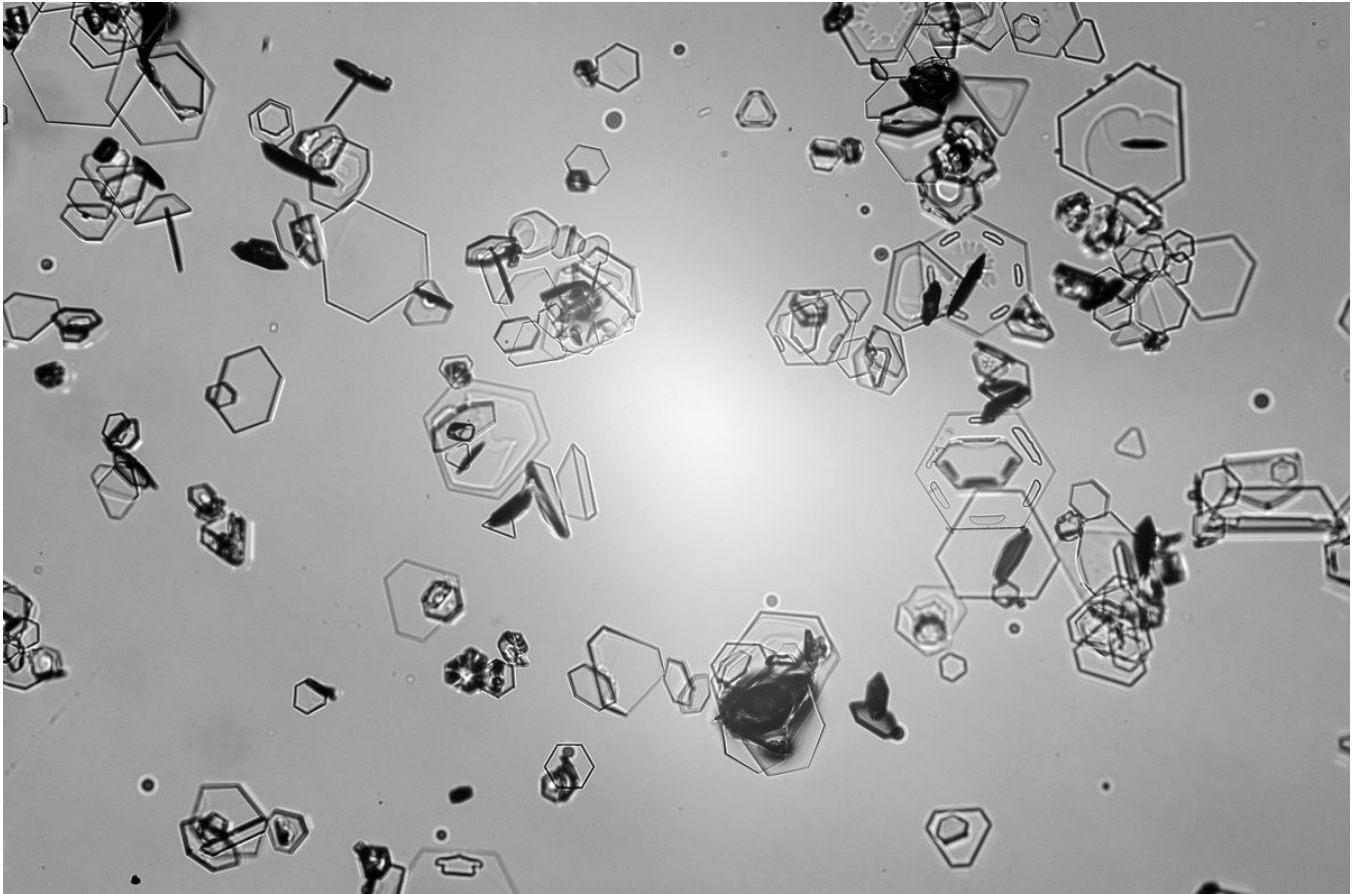

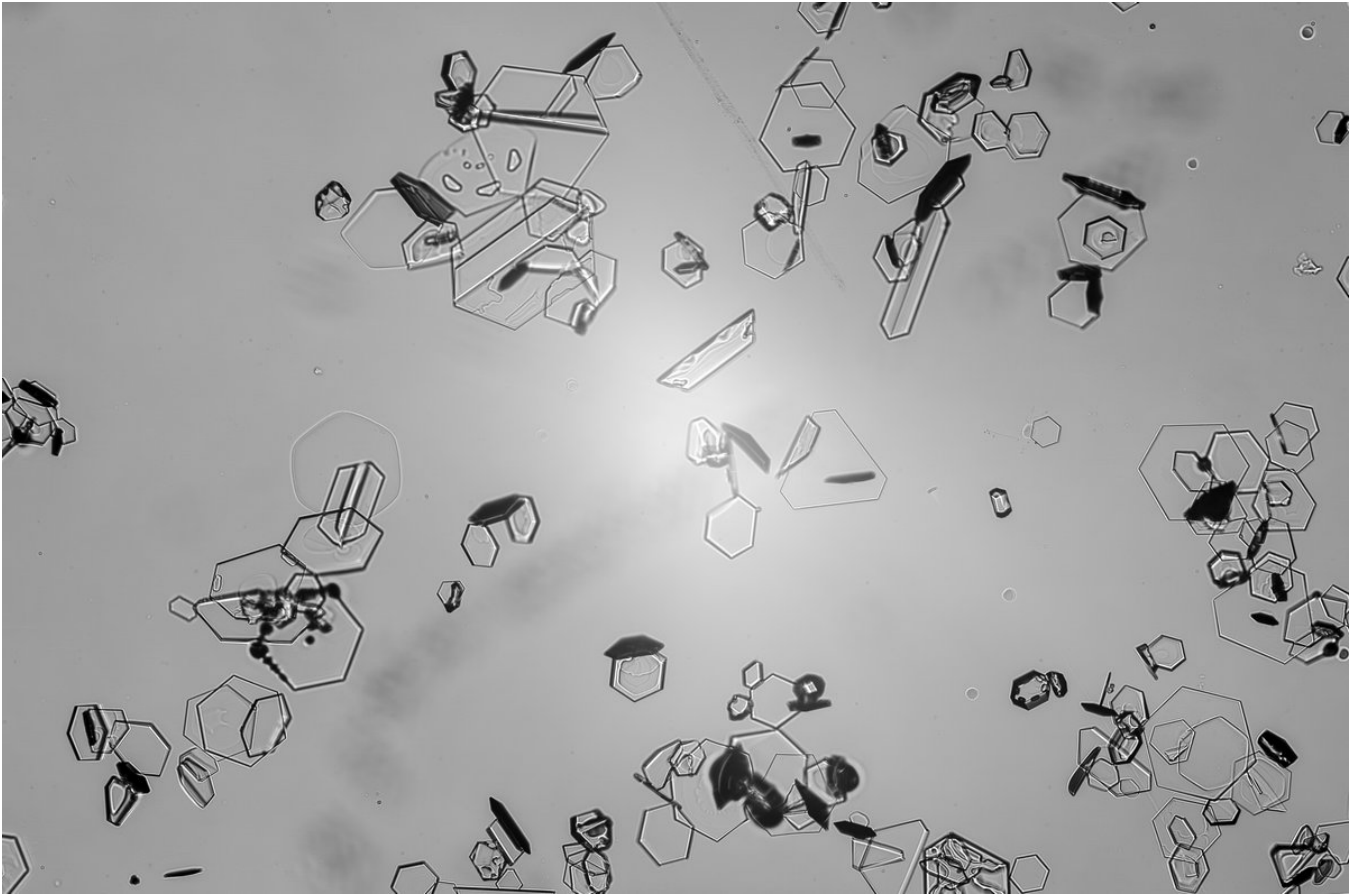

4/7 - 2026-02-16 12:34 UTC

14/15 Feb 2026, Rovaniemi. One more set of crystals from the first set.

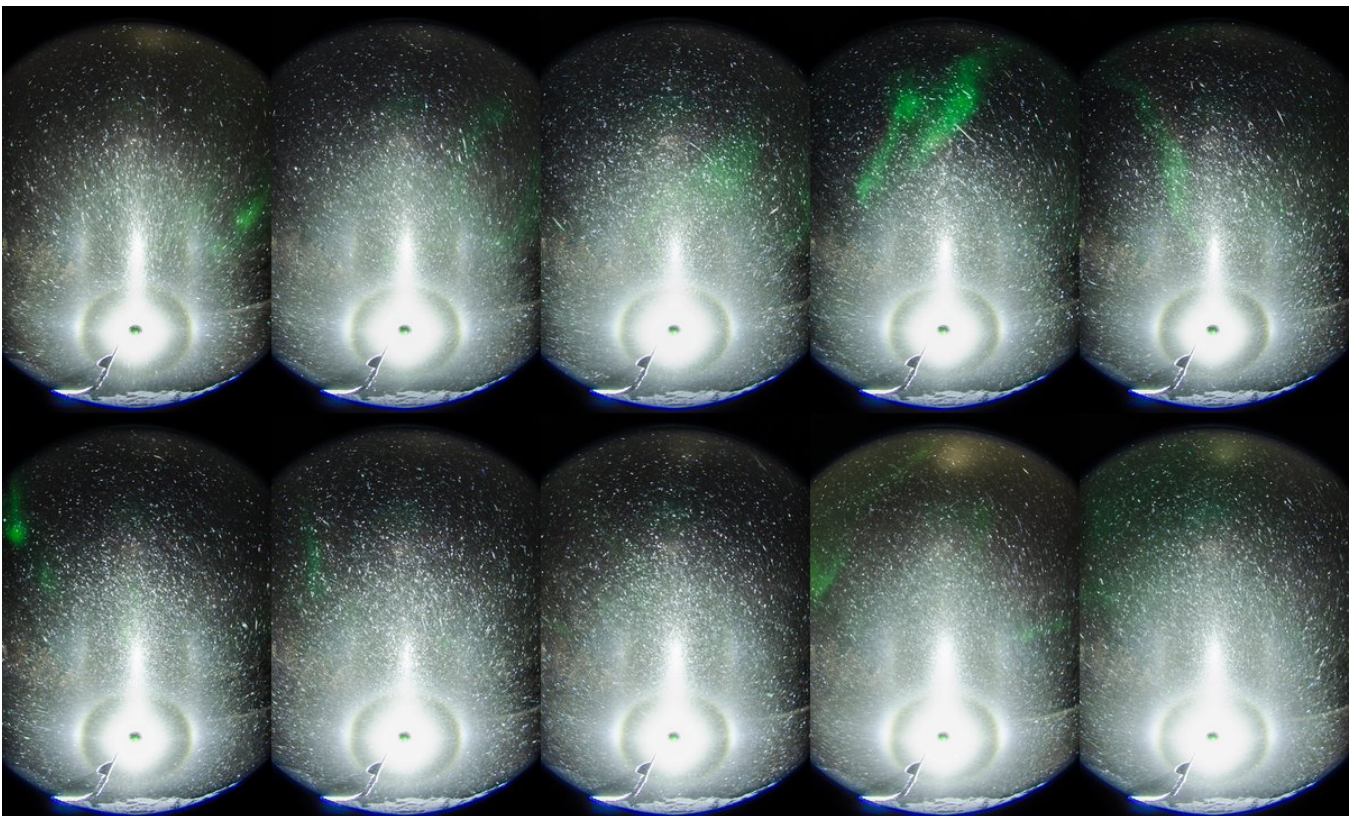

5/7 - 2026-02-17 17:19 UTC

14/15 Feb 2026, Rovaniemi. Sampling of the above crystals started 0249 and the last crystal photo shown was taken 0317 (crystal are landing on the dish also when I photograph them). This collage of every 5th display shot is from 0249 to 0310.

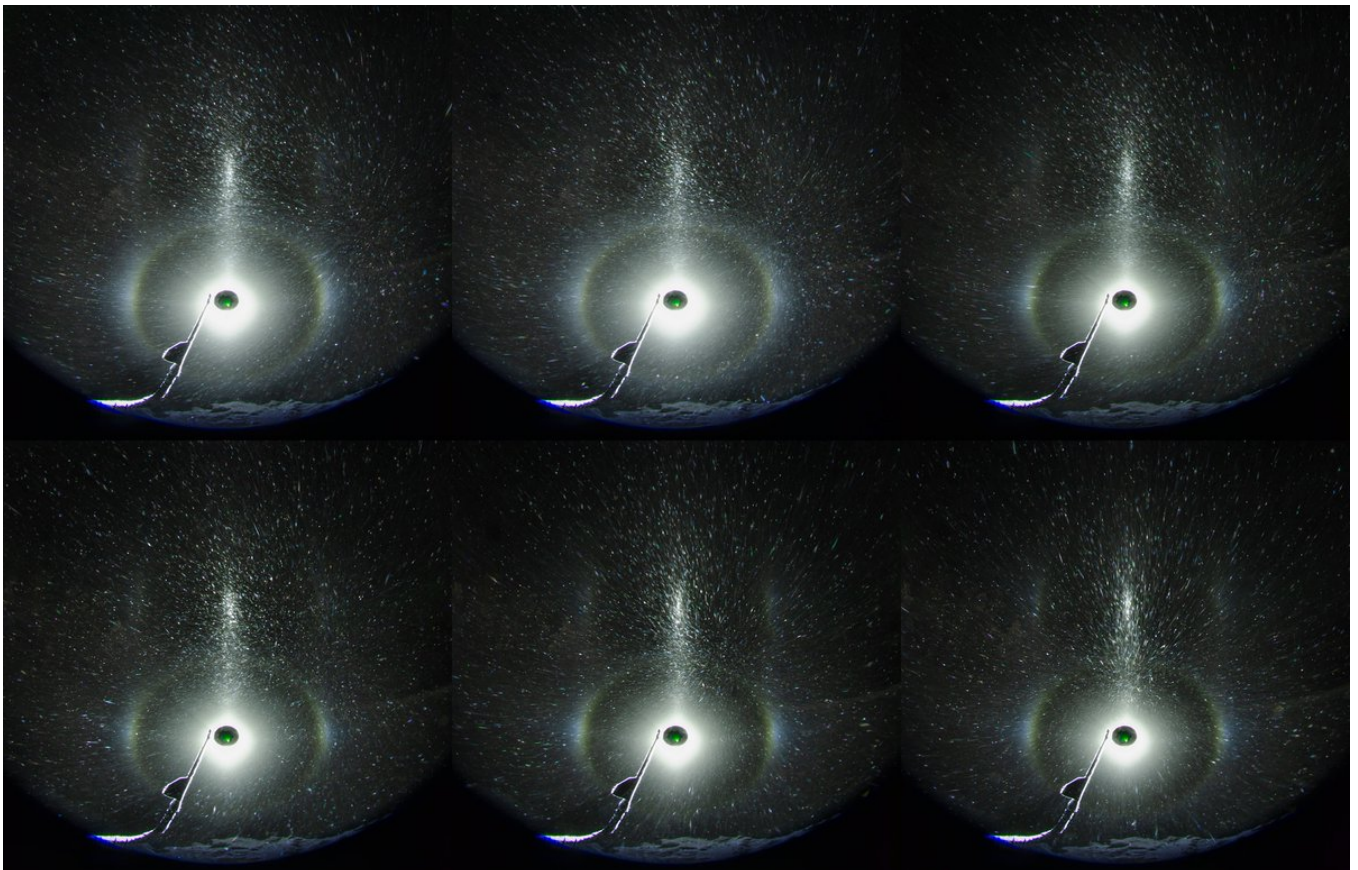

6/7 - 2026-02-17 17:51 UTC

14/15 Feb 2026, Rovaniemi. From 0314 to 0317. I opted here for darker photos to show the Moilanen arc. The thread's opening post's ave stack is the full set of these darker shots.

Crystal photos above contain some of the supposed Moila crystals. For reminder, the title image of an Ice Crystal Halos blog post by Nicolas Lefaudeux shows a few of them: <https://t.co/x5n7nxqpY3>

The crystals appear to have been photographed by me and Luomanen, but I don't know the original post(s), if there actually is any. I have a recollection of Jukka Ruoskanen having made a post in which a collage of supposed Moila crystals are shown, but couldn't find it.

7/7 - 2026-02-17 18:03 UTC

14/15 Feb 2026, Rovaniemi. Max of the opening post's set.
