20 March 2026, Rovaniemi. Looked like it's gonna be the spring's first chance for the frozen puddle stuff, so I took the Bosch EasyCut&Grind and drove to the Ylikylä snow dump to cut some pieces. Got one of best Ujvarosi stars I have seen, starts at 0:11. At first, the underside is facing the sun, then I flip it at 1:00. There were just a couple of suitable puddles and I exhausted them all. It will get better as the spring progresses.
