Pyramid helic arc requires exceptionally sharp 23° plate. Finding oneself in that situation, a wise man takes all-sky stack, because why settle for national or personal firsts when prospects are for global firsts. The simulation is for 30° , tilt 2 degs. While the colored opposite cross and the concise spots have complex 6 and 5 hit raypaths, the rectangled arc is simpler 3-hit, 1-23-25.
