Good times have arrived for halo simulating! A handful of people are working on new shiny tools, and two have been publicly released this year. First to come was Lumice by Jiajie Zhang <https://t.co/VUbbePpoz4> and a few days ago Jukka Ruoskanen published HaloPoint 3 <https://t.co/qWKeC7bs4x>. In the images, first is a simulation with Lumice squeezing out the tanarc blue edges and then some multi-scattering analysis with HaloPoint 3.
